

CLOUD COMPUTING IMP

Important Note for Exam Preparation

These questions are selected after analyzing syllabus + previous year papers, so they are highly important and repeated topics for RGPV Cloud Computing exams.

But remember:

- 100% same questions paper me aayenge iski guarantee nahi hoti.
- Sirf questions ratne ki jagah concepts bhi samajh ke prepare karo.
- Agar in topics ko acche se prepare kar liya, diagrams + definitions yaad kar liye, to pass hona kaafi easy ho jayega.
- PYQ based preparation usually exam coverage bahut improve karti hai.

Recommended:

- ✓ Important definitions prepare karo
- ✓ Long answers ke headings yaad karo
- ✓ Diagrams practice karo
- ✓ At least 2–3 PYQs per unit dekho

Itna preparation karoge to exam comfortably clear ho sakta hai.

Here the imp's unit wise

UNIT 1 — SOA, Web Services, Cloud Basics

1. Explain Cloud Computing with characteristics, advantages and limitations.
2. Explain Service Oriented Architecture (SOA) with architecture diagram.
3. Explain Web Services Architecture.

4. Explain SOAP architecture and working.
 5. Explain WSDL and UDDI in detail.
 6. Difference between SOAP and RESTful services.
 7. Explain RESTful Web Services with characteristics and components.
 8. Explain SaaS, PaaS and IaaS with examples.
 9. Explain organizational scenarios of cloud computing.
 10. Explain administering and monitoring cloud services.
 11. Explain Hypervisor and types of Hypervisors.
 12. Explain cloud computing reference model.
- (Repeated in PYQ)

UNIT 2 — Virtualization, Utility Computing, Ajax, Multi-tenancy

1. Explain Utility Computing.
 2. Explain Elastic Computing.
 3. Explain AJAX architecture and working.
 4. Explain Mashups and User Interface.
 5. Explain Virtualization Technology in cloud computing.
 6. Explain applications of virtualization in enterprises.
 7. Explain pitfalls/challenges of virtualization.
 8. Explain Multi-tenant software architecture.
 9. Explain Multi-schema approach.
 10. Explain multi-tenancy using cloud data stores.
 11. Explain Virtual Desktop Infrastructure (VDI).
- (Repeated PYQ)

12.Explain Fault Tolerance and Cloud Ecosystem.

(Repeated PYQ)

13.Explain Block level and File level storage virtualization.

(Repeated PYQ)

14.Explain Virtual SAN.

(Repeated PYQ)

UNIT 3 — Data in Cloud, GFS, HDFS, Hadoop, MapReduce

1. Explain relational databases in cloud computing.

2. Explain Google File System (GFS).

3. Explain Hadoop Distributed File System (HDFS).

4. Compare GFS and HDFS.

(Highly Important)

5. Explain Big Table.

6. Explain HBase architecture.

7. Explain Dynamo database.

8. Explain MapReduce model with diagram.

9. Explain parallel computing in MapReduce.

10. Explain enterprise batch processing.

11. Explain relational operations in MapReduce.

12. Explain applications/examples of MapReduce.

13. Explain Hadoop architecture.

(Repeated PYQ)

UNIT 4 — Cloud Security

1. Explain cloud security fundamentals.
(Repeated PYQ)
2. Explain cloud computing security architecture.
(Repeated)
3. Explain privacy and security in cloud computing.
4. Explain trusted cloud computing.
5. Explain virtualization security management.
6. Explain VM security threats and recommendations.
7. Explain VM-specific security techniques.
8. Explain secure execution environment in cloud.
9. Explain communication security in cloud computing.
10. Explain vulnerability assessment tools for cloud.
11. Explain cloud computing security challenges.
(Repeated PYQ)

UNIT 5 — Advanced Cloud Topics

1. Explain issues in cloud computing.
2. Explain QoS issues in cloud computing.
3. Explain dependability in cloud computing.
4. Explain data migration in cloud.
5. Explain streaming in cloud computing.
6. Explain cloud middleware.
7. Explain mobile cloud computing.

8. Explain Inter-cloud issues.
 - 9 Explain Sky Computing.
 - 10 Explain Grid of Clouds.
 11. Explain load balancing in cloud computing.
 12. Explain resource optimization.
 13. Explain resource dynamic reconfiguration Explain monitoring in cloud computing.
 14. Explain installation of cloud platforms and performance evaluation. Explain features and functions of cloud computing platforms.
 15. Explain high availability and disaster recovery in cloud computing.
- (Repeated PYQ)

ALL THE BEST
